SUMMARY

I'm a results-oriented software developer who can write, build, deploy, release and maintain software. By embracing the DevOps culture, I understand every aspect of the software development lifecycle from the ground up to a product that brings profit to the business.

Some of my best interpersonal skills are:
- Getting the job done within expectations.
- Designing complex systems.
- Managing people.
- Helping the business win.

If that's a checklist you're looking for in a software developer, let's talk.

EXPERIENCE

Tech lead
Science for Change

📅 2022 - ongoing   📍 Barcelona, Spain

Some of the notable tasks:
- Managed multiple platforms and applications, made system design decisions and maintained core projects.
- Managed servers/containers on the AWS cloud and deployed CI/CD pipeline.
- Recruited and trained new team members.

What did I learn:
- Project management and planning, Github Projects, CI/CD.
- Containerization: Docker and container orchestration.
- AWS, Laravel, Flask, Swagger, REST.

DevOps Engineer
Albedo Telecom

📅 2021- 2022   📍 Barcelona, Spain

Some of the notable tasks:
- Restructured the way the company stored and updated registers: from handwriting and Excel sheets to a fully functional, responsive web platform.
- Transformed loosely written entries into a database that reduced search/retrieval time from hours to milliseconds.
- Communicated and listened to direct users, researched and selected front-end components and visuals to meet their needs.
- Designed database of ~100 tables and backend from scratch.

What did I learn:
- Pitfalls of miscommunication within the project.
- Large SQL database management with different database access tools.
- Software testing, Linux advanced commands, TCP/IP networking principles.

Full Stack Developer
VT Convert

📅 2020   📍 Barcelona, Spain

Some of the notable tasks:
- Managed multiple WordPress projects by designing layouts, customising themes for projects and tweaking plugins with custom CSS/JS snippets.
- Created SQL database for CMS and optimized it to 3NF.
- Maintained crypto exchange platform through daily debugging, lead generation and client communication. Automated charting scripts.

What did I learn:
- Client-server architecture.
- LAMP stack from scratch.
- Factors that determine the price of digital currency.

EDUCATION

Máster en Programación Informática (Java, C# y PHP)
Esneca Business School
2019

Certificados de profesionalidad, TIC: informática y comunicaciones
Bootcamp by Nascor Training
2020
